KEY FEATURES & BENEFITS

CENTRALIZED PORTFOLIO MANAGEMENT AND TRACKING

Improve data integrity by storing and managing all data in a centralized cloud-based location – not on user desktops – enabling workforce and assignment tracking at a glance.

GUIDED RMF PROCESS Achieve Authorization to Operate (ATO) up to 60% faster with Cybersecurity Manager's collaborative step-by-step guided process. Ensure authorization steps are completed on time with automation, inheritance, and re-use features.

STIG COMPLIANCE TASK MANAGEMENT Ensure Security Technical Information Guide (STIG) compliance by assigning related tasks and rules. Assign deadlines to stay compliant and ahead of vulnerabilities related to software, hardware, physical architectures, and logical architectures.

AUTOMATE POA&M CREATION Automatically create and assign Plan of Action and Milestones (POA&M) then attach detailed lists of resources, task milestones, and required completion dates.

CONTINUOUS SYSTEM MONITORING Stave's ServiceNow® CMDB and Security Operations integrations enable a complete view of package activities and historical risks associated therein – informing better future actions and enabling powerful risk avoidance.

Reduce errors inherent in manual security processes by:

- Implementing guided workflows
- Standardizing remedial activity
- Automatically generating, assigning POAMs
- Collaborating on STIG checklists inside the platform
- Tracking it all in one place with custom dashboards & reports
